

## Level 1 - Matrix Addition

Write a function that adds two matrices returns the result. To keep things simple the array sizes will be fixed sizes of 2x2 (`uint256[2][2]`). Take a look at [Wikipedia](#) if you need help understanding matrix addition. Your solution should implement the following interface:

```
interface Isolution1 {
    function solution(
        uint256[2][2] calldata x,
        uint256[2][2] calldata y
    ) external pure returns (
        uint256[2][2] memory
    );
}
```
